

The Beginner's Guide to JCMT Observing Projects

—

The lifecycle of a project and the responsibilities of the proposing team and the observatory.

Before Observing

—

Team propose a Project

- Proposal is Assessed by TAC/Referees.
- Awarded time (hopefully).
- Assigned a priority in the upcoming semester.

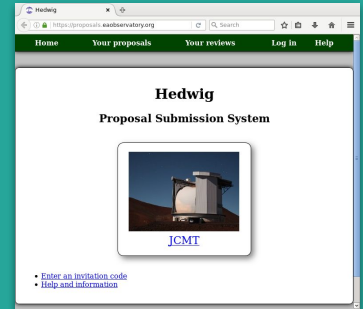

Project Created in the OMP and team notified!

Team upload MSBs

- Friend of Project (FoP) checks MSBs.
- If required, back and forth between FoP and team.
- FoP enables project in queue once MSBs are OK.

Project MSBS are now in the queue for observing!

JCMT-OT

During Observing

—

After Observing

—

Team finalise data reduction

- Observatory provides software, pipelines and support.
- FoP and SciCom staff available for questions and help.

Team analyse data and publish

- Quote their JCMT project code in the observations or acknowledgements section of paper.
 - Acknowledge JCMT and cite relevant instrument papers.
- FoP and Observatory staff available for help with technical issues/calibration etc.

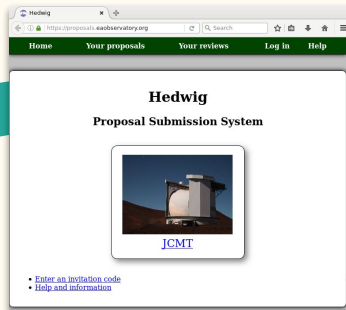

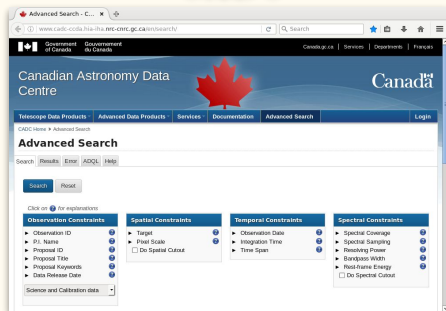

Provided software

Progress of the observing program is monitored using the OMP. Includes links to follow a night's observing live.

The ORAC-DR Data Reduction pipelines are run on the observations, both during the night so the Telescope Operator can assess quality, and the next day for a high quality reduction.

```

1 year later...

—

- 1 year after the end of the semester data are taken in, they become publicly available to the world at CADC.
- Other scientists can now make use of the data.

You'll search, you'll filter,
you'll find the awful truth
Are you ready for...

THE JGWT SCIENCE ARCHIVE!

It's the data!
Its come back to life!
Run for your papers!

Now at a CADC
near you!
